Ridiculous Dietary Allowance Steve Hickey, Hilary Roberts, 2005-03-01 Many people consuming RDA levels of vitamins are likely to suffer from deficiency disease and premature death. Current official recommendations for nutrient intakes are inappropriate. As this book demonstrates, the recommended dietary intake for vitamin C owes more to politics and prejudice

than to science. Furthermore, the research behind the RDA values for vitamin C is biased and insubstantial. This book presents an open challenge to the government experts, who support the out-of-date RDA approach to nutrition and thereby endanger the health of the entire population. For people who value the peer review process, this book was read by thousands, including doctors and scientists. The readers reported no significant scientific errors. The authors therefore assert that the RDA and the Codex justification for low intakes of vitamin C are both invalid and indefensible.

Rethinking Educational Practice Through Reflexive Inquiry Nicole Mockler,Judyth Sachs,2011-04-13 Susan Groundwater-Smith is one of the most influential voices in the world of educational practitioner inquiry. The convener in Australia of the Coalition of Knowledge Building Schools, she is a staunch advocate of innovative methods of practitioner inquiry with a particular emphasis upon student voice and the use of images in capturing young people's perspectives on their learning experience. So it is more than fitting that this unique text on practitioner inquiry and teacher professional learning is dedicated to her. Rethinking Education Practice Through Reflexive Inquiry is a compilation of essays that explore contemporary issues in practitioner inquiry and action research from the perspective of both university-based and school-based authors. The essays discuss the practical, political and theoretical dimensions of practitioner inquiry, advancing the argument that the adoption of an inquiring approach to practice is both an integral dimension of teachers' work in the modern school as well as critical to effective and authentic professional learning. And the essays draw on the work of Groundwater-Smith to demonstrate the benefits brought to bear on schools, teachers and learners when the complex nature of the relationship between inquiry and practice is understood and acted upon in pursuit of democratic knowledge interests.

Task Design In Mathematics Education Anne Watson, Minoru Ohtani, 2015-10-26 *THIS BOOK IS AVAILABLE AS OPEN ACCESS BOOK ON SPRINGERLINK* This open access book is the product of ICMI Study 22 Task Design in Mathematics Education. The study offers a state-of-the-art summary of relevant research and goes beyond that to develop new insights and new areas of knowledge and study about task design. The authors represent a wide range of countries and cultures and are leading researchers, teachers and designers. In particular, the authors develop explicit understandings of the opportunities and difficulties involved in designing and implementing tasks and of the interfaces between the teaching, researching and designing roles - recognising that these might be undertaken by the same person or by completely separate teams. Tasks generate the activity through which learners meet mathematical concepts, ideas, strategies and learn to use and develop mathematical thinking and modes of enquiry. Teaching includes the selection, modification, design, sequencing, installation, observation and evaluation of tasks. The book illustrates how task design is core to effective teaching, whether the task is a complex, extended, investigation or a small part of a lesson; whether it is part of a curriculum system, such as a textbook, or promotes free standing activity; whether the task comes from published source or is devised by the teacher or the student.
